

Service Crane Overloads

Don't just warn operators about unsafe conditions.

Other service cranes only warn operators about unsafe load conditions, but don't stop them.

STOP them.

Auto Crane's patented NexStar™ Crane Management System stops overloads and other unsafe conditions. Don't just rely on operator training and equipment warnings to safeguard personnel and machinery—depend on the brand that launched an industry.

- Sensors prohibit operation in unlevel conditions
- Automatic stop at 100% load capacity

Auto Crane keeps people, equipment and loads safer.
